Summary

Being able to see, navigate, and make sense of sites is fundamental to managing a fleet. Whether you are locating a customer, triaging issues, or reporting on a group of installations, it all starts with a reliable site list.

The Sites list in Gridshare gives you a readable directory of your fleet, with each site presented alongside key details. From this page, you can search for sites, filter your fleet, and share views with colleagues.

We will continue to build on Sites list going forward: making more site data searchable, adding new ways to segment fleets, and using the Sites list as a platform that other Gridshare capabilities can build upon.

The Sites list page

The Sites list shows every site in your fleet by default. Sites are presented in a table, with the most recently created shown first.

By default, the following columns are shown for each site:

- **Site reference** – the name given to the site by your organization
- **Location** – the site's city and state
- **Devices** – the devices installed at the site
- **Alerts** – critical, warning and info alerts triggered at the site in the last 24 hours
- **Created** – the date the site was created

SITES

Searching and filtering your fleet

Searching for Sites

Search for a site using its site reference, site ID, address, hub ID, and device serials. A partial match will return the site, so sites should appear even when searches contain only a few characters of their reference.

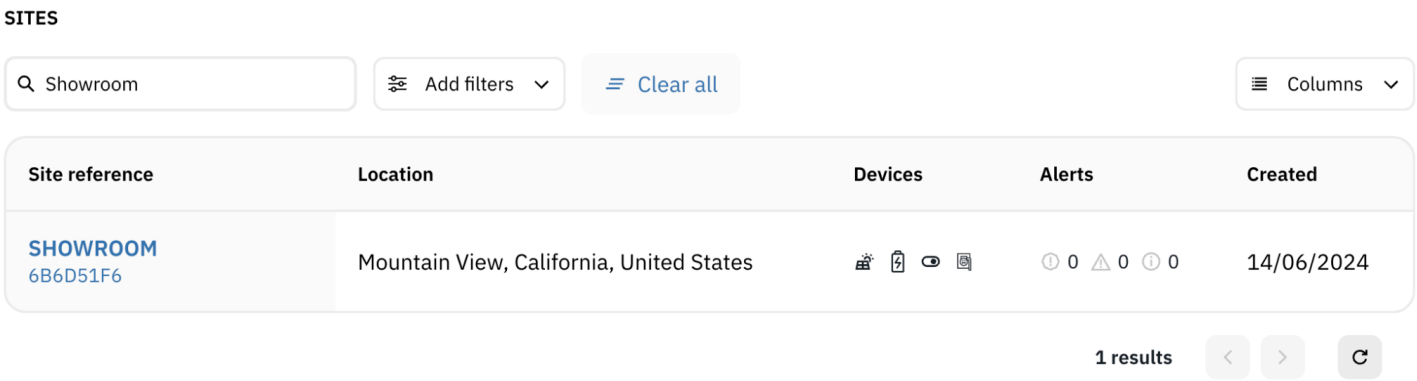

Figure 2. Results of search in Sites list

Filtering your fleet

Narrow your fleet to a specific set of sites by using the following filters.

Filter	Description
Has PTO?	Filter for sites that have or have not received permission to operate (PTO)
PTO date	Filter for sites that received PTO within a certain date range
Creation date	Filter for sites that were created within a certain date range
Has app customers?	Filter for sites that have or have not got Lunar app accounts associated with them
Outage Watch enabled?	Filter for sites that have or have not got Outage Watch enabled
Customer mode	Filter for sites with specified customer modes
Groups	Filter for sites by groups e.g. sites that have been shared with a third party
Import tariff	Filter for sites on the specified import tariffs
Export tariff	Filter for sites on the specified export tariffs

Several filters can be applied at once, and filtering works alongside search to further refine results.

Simply send the web address of a view with search and filters enabled to another user, and this will open the same view for them.

Figure 3. Results of filtering in Sites list

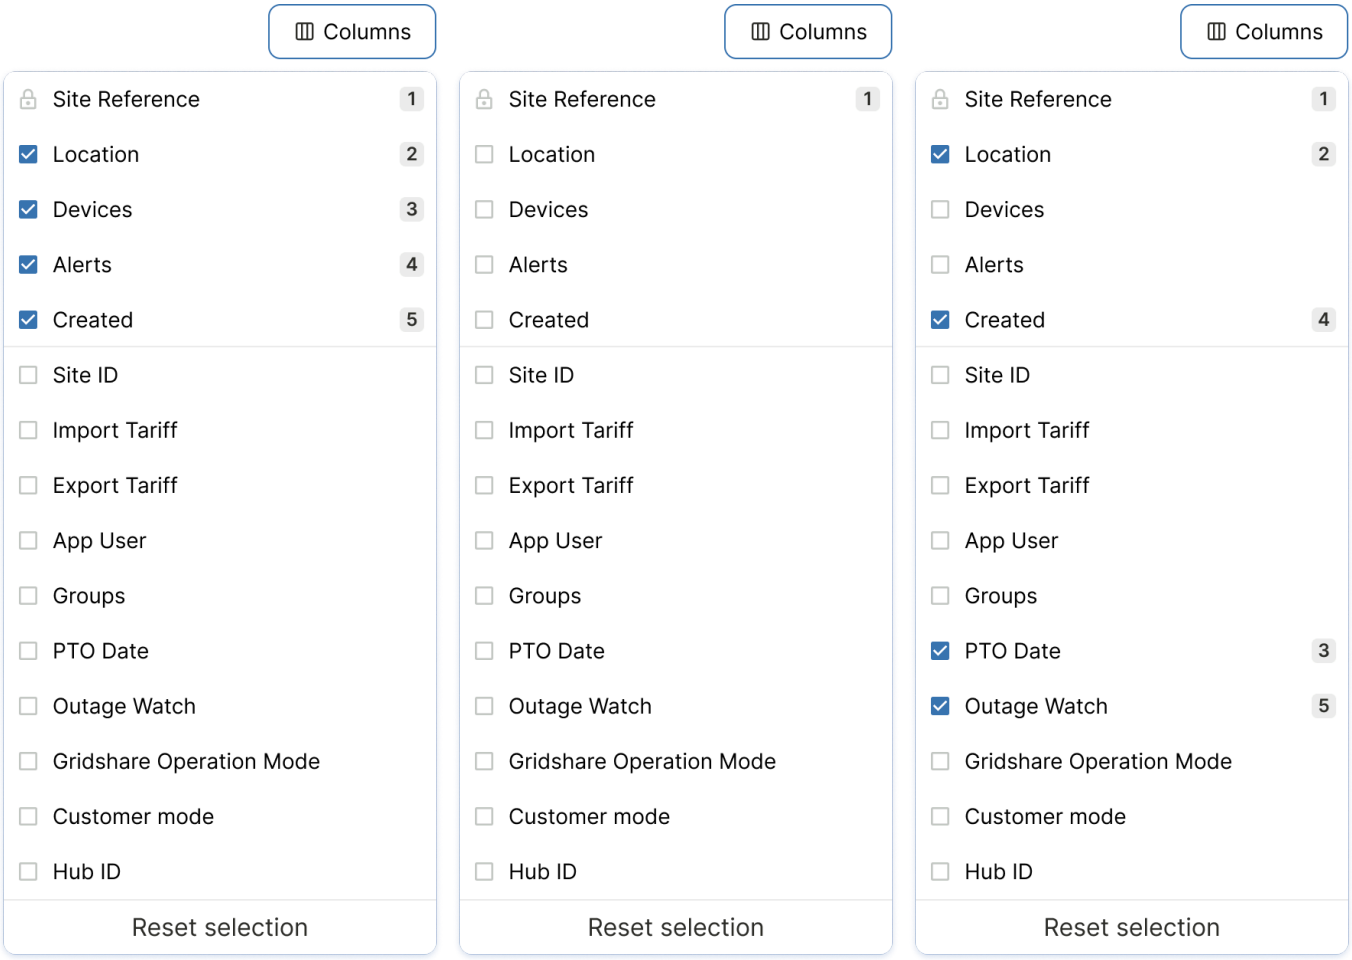

Choosing Your Columns

Select which columns are shown in the table from the following. Column selections are saved, so a chosen view is maintained across sessions.

- Site reference
- Shortcode
- Site ID
- Location
- Created date
- Import and export tariffs
- Associated app users
- Alerts (critical, warning, info)
- Devices
- Groups
- Permission to operate (PTO) date
- Outage watch enabled
- Customer mode
- Device tags
- Hub ID

You can make your column selection using the **Columns** dropdown. You can personalize your columns by:

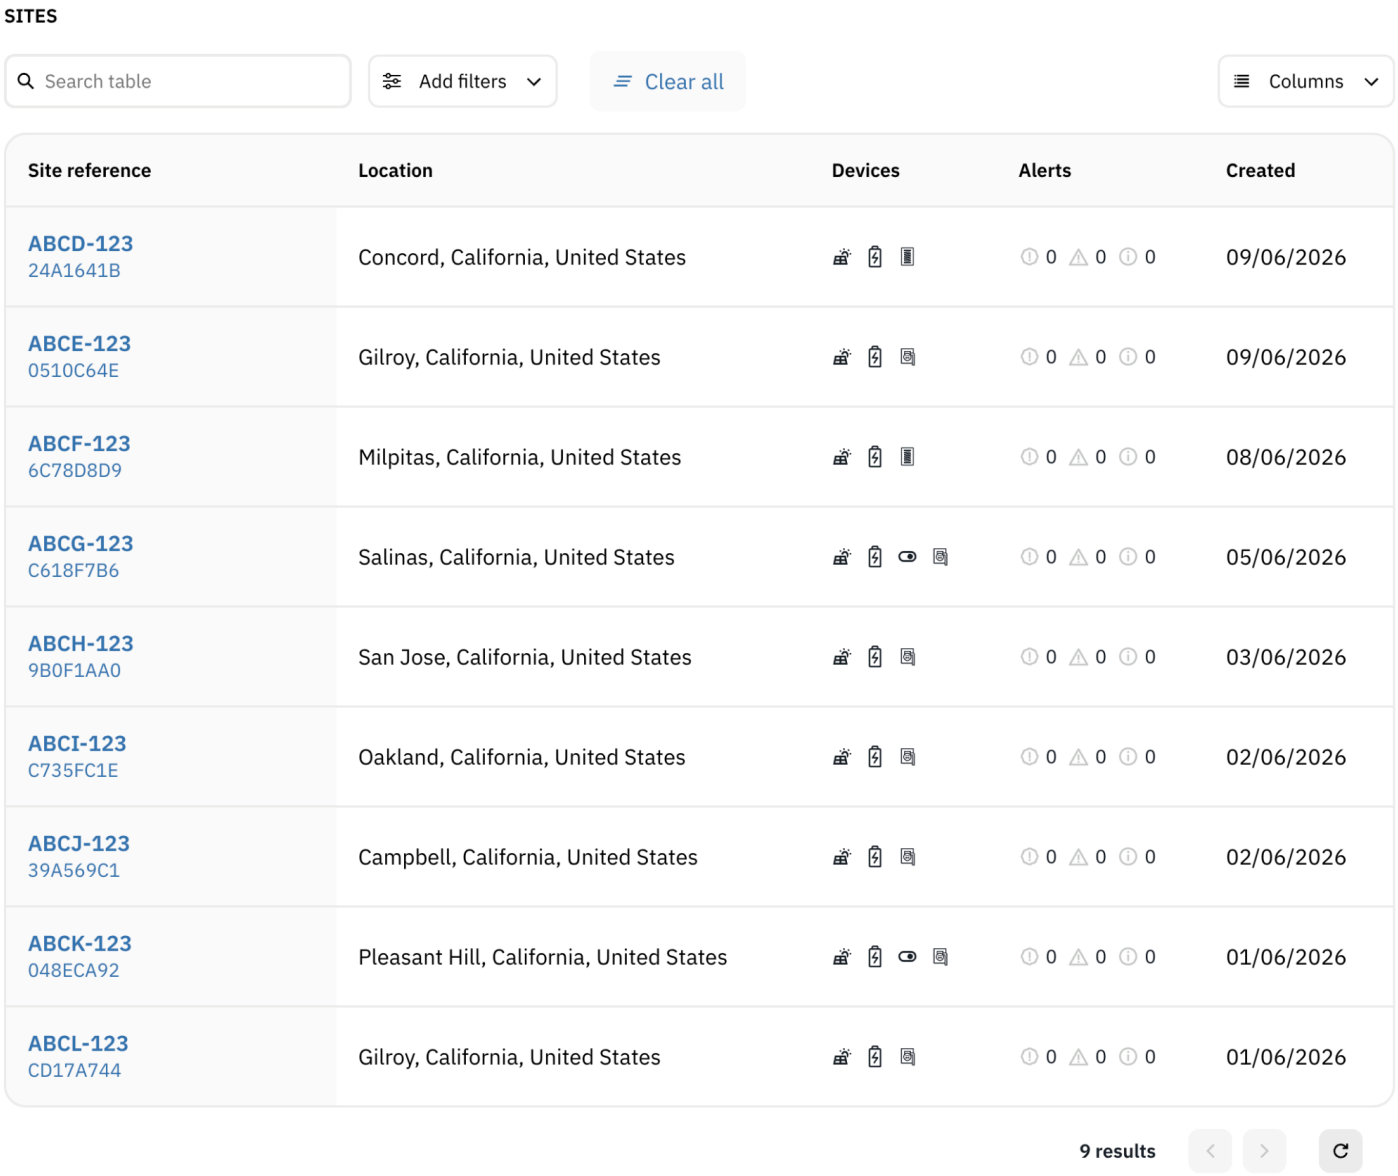

1. Clicking the Columns dropdown	**2.** Deselecting the columns you don't want to see. NB: The Site Reference column is locked and cannot be deselected	**3.** Selecting the columns you want in your site list NB: Columns will be shown in the order they are selected

Using the Sites list

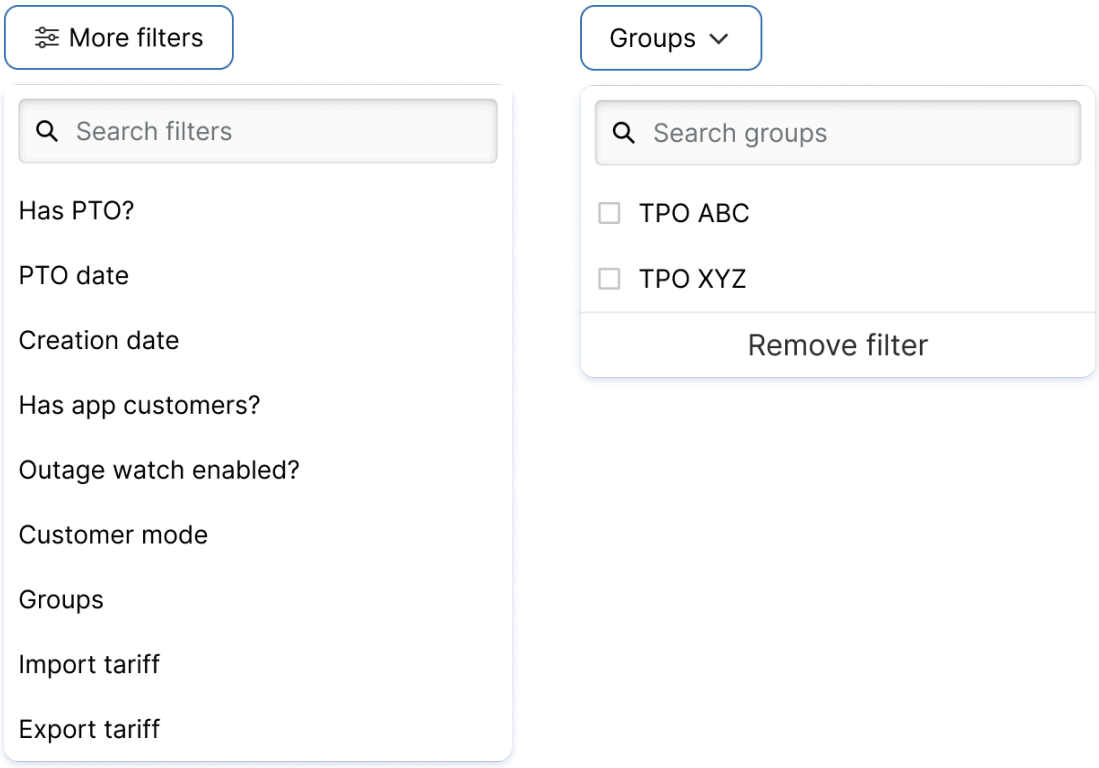

The following example walks through identifying sites belonging to a third-party owner (TPO) that have not received permission to operate (PTO):

1. Go to **Sites list**

2. Open the **Groups** filter and select the TPO in question

    - Click **More filters**
    - Select **Groups**
    - Select the desired TPO from the Groups filter

    - At this stage, the resulting search will return all sites that are shared with the TPO selected

SITES

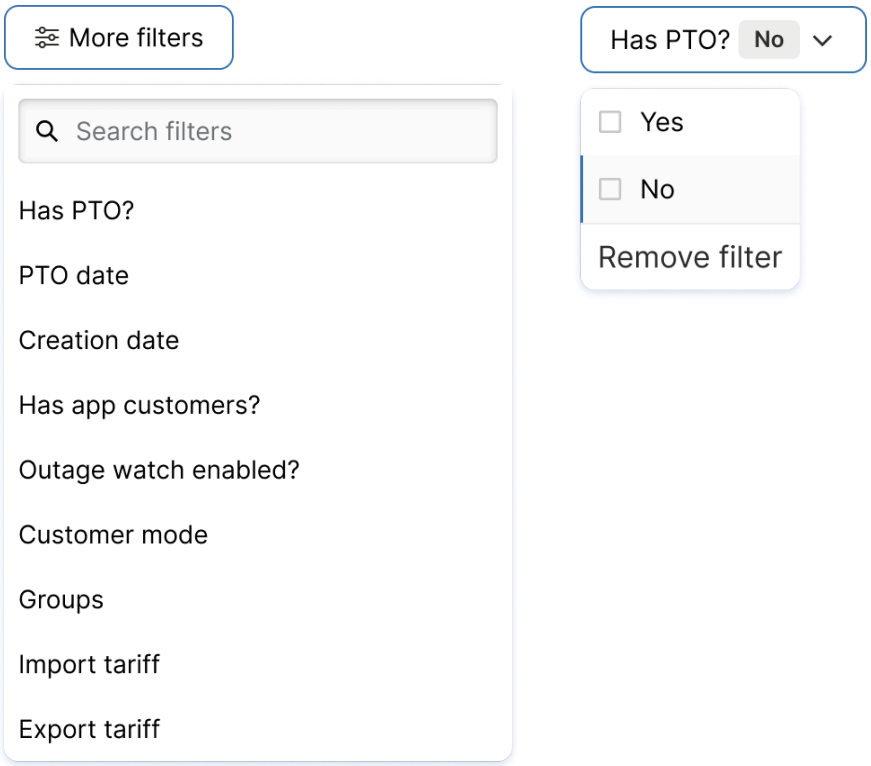

Search table | Add filters | Groups 1 | Clear all | Columns

Site reference	Location	Devices	Alerts	Created
ABCD-123 4BD336A4	Fresno, California, United States		0 0 0	25/07/2026
ABCE-123 C02FF861	Lindsay, California, United States		0 0 0	22/07/2026
ABCF-123 2EC4CCC5	Clovis, California, United States		0 0 0	13/07/2026
ABCG-123 C74A3424	Fresno, California, United States		0 0 0	15/06/2026
ABCH-123 4F5E6804	Reedley, California, United States		0 0 0	03/06/2026

5 results

3. Open the **Has PTO?** filter and select **No**

    - Click **More filters**
    - Select **Has PTO?**
    - Select the desired filter, **No**

The results now show only sites for the selected TPO which are yet to receive PTO. This view can be shared with a colleague by copying the page's web address.
