POWERFUL, SIMPLE, BRILLIANTLY DESIGNED

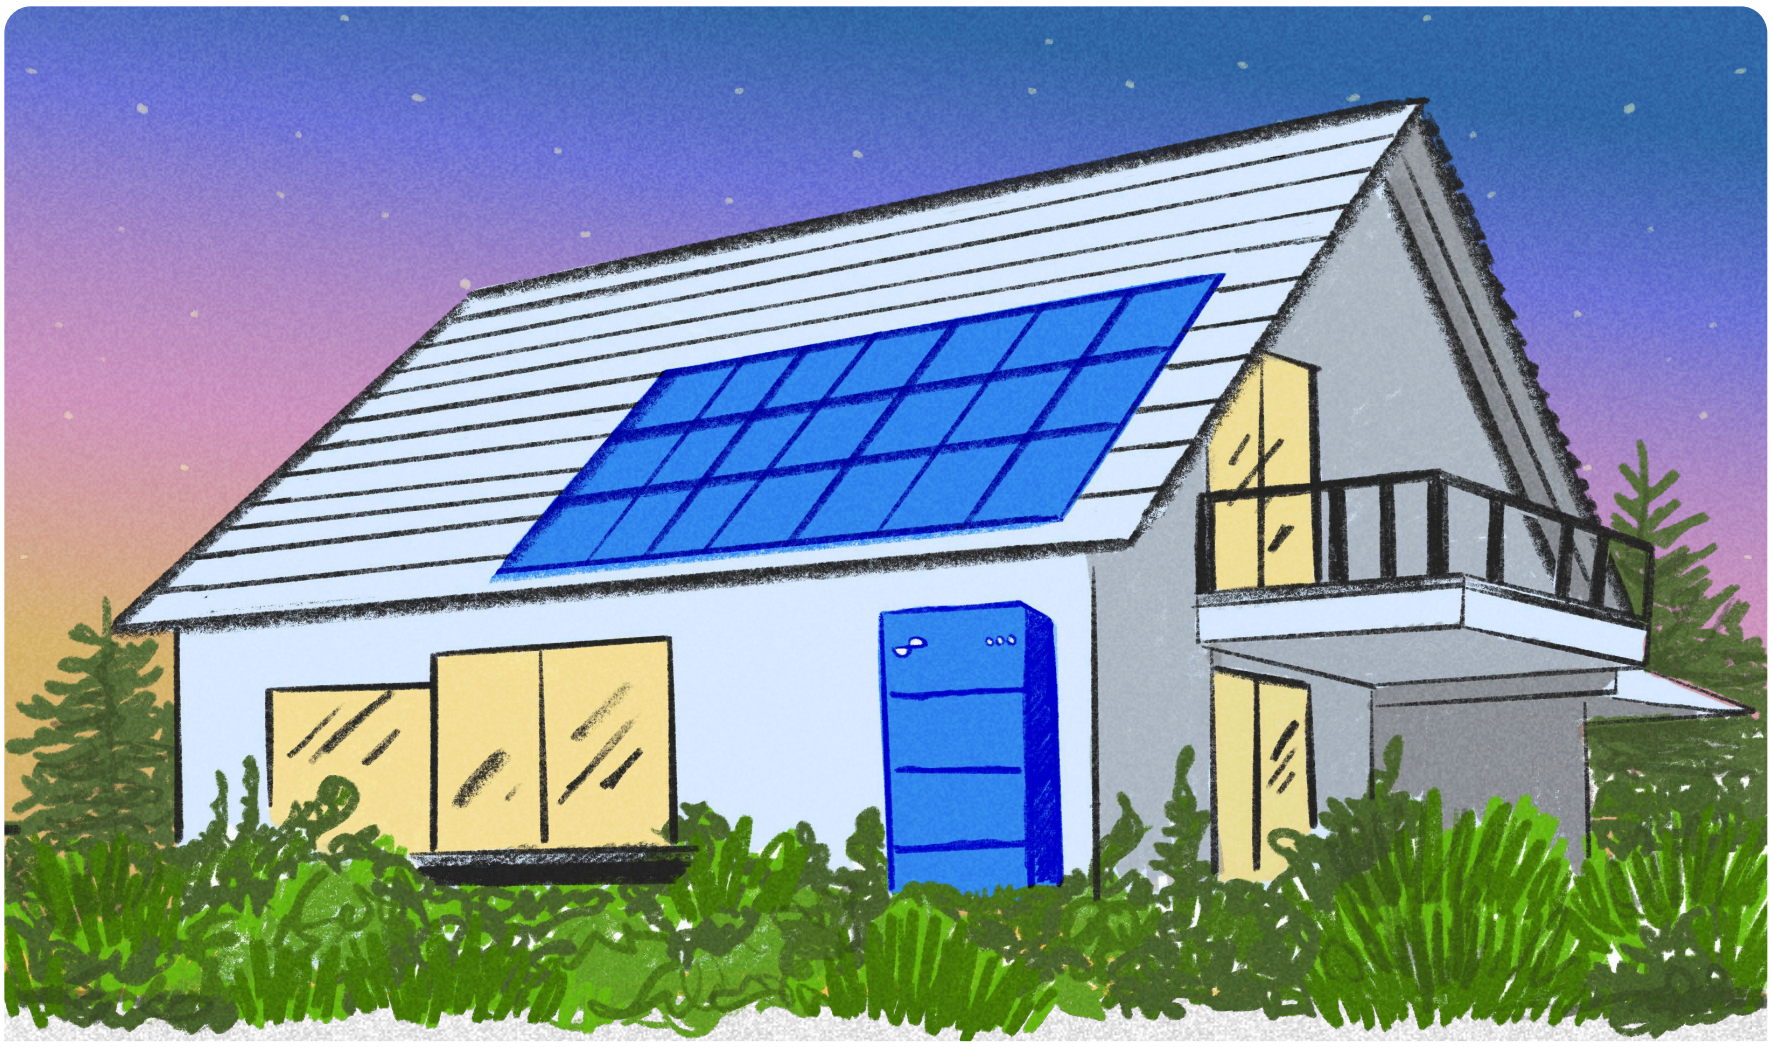

The Lunar System

Any solar and battery system can get you savings and avoid power outages — **Lunar gets you more.**

More savings, more earnings

An energy nerd in your pocket.

Lunar AI makes a custom plan every day for every home to maximize savings. In 2025, **Lunar System owners saved an additional $338 versus a standard battery operating mode and earned $464** by supporting the grid during peak demand.

More energy

Outsmart the shade.

Most systems let one shaded panel drag the rest down. With Lunar Maximizers, each panel runs independently, **adding up to 5% more solar production overall.**

More storage

A perfect fit.

15, 20, 25, or 30 kWh. One modular system, sized right for your home from the start. No need to add more later. No need to start over.

More backup

Unprecedented control.

Outage Watch sees the storm coming and gets your battery ready. Smart Breakers cut non-essentials when the grid goes down. The app shows your remaining power, live, **as you decide what stays on.**
